CONTENTS OF VOLUME 189

NUMBER 1, AUGUST 15, 1990

Review. Cytogenetic Methods for the Mouse: Preparation of Chromosomes, Karyotyping, and *in Situ* Hybridization — *James J. Lee, Dorothy Warburton, and Elizabeth J. Robertson* 1

Determination of Dehydroascorbic Acid Using High-Performance Liquid Chromatography with Coulometric Electrochemical Detection — *Kuldeep R. Dhariwal, Philip W. Washko, and Mark Levine* 18

Identification and Quantitation of Corrinoid Precursors of Cobalamin from *Pseudomonas denitrificans* by High-Performance Liquid Chromatography — *Francis Blanche, Denis Thibaut, Michel Couder, and Jean-Claude Muller* 24

Adapting the Polymerase Chain Reaction to a Double-Stranded RNA Genome — *Vergil S. Davis and John A. Boyle* 30

Quantitation of Cu-Containing Metallothionein by a Cd-Saturation Method — *Dominik Klein, Rüdiger Bartsch, and Karl H. Summer* 35

Applications of Magnetic Beads with Covalently Attached Oligonucleotides in Hybridization: Isolation and Detection of Specific Measles Virus mRNA from a Crude Cell Lysate — *Catrine Albretsen, Karl-Henning Kalland, Bjørn-Ivar Haukanes, Leiv-Sigve Håvarstein, and Kjell Kleppe* 40

Phosphorescent Zinc Sulfide Is a Nonradioactive Alternative for Marking Autoradiograms — *Donald Seto, Cliff Rohrabacher, Jason Seto, and Leroy Hood* 51

Determination of 11α-Hydroxy-9,15-dioxo-2,3,4,5,20-pentanor-19-carboxyprostanoic Acid and 9α,11α-Dihydroxy-15-oxo-2,3,4,5,20-pentanor-19-carboxyprostanoic Acid by Gas Chromatography/Negative Ion Chemical Ionization Triple-Stage Quadrupole Mass Spectrometry — *Horst Schweer, Claus O. Meese, and Hannsjörg W. Seyberth* 54

How to Evaluate the Distribution of an "Invisible" Amphiphile between Biological Membranes and Water — *B. de Foresta, Z. Merah, M. le Maire, and Ph. Champeil* 59

Enhanced Removal of Detergent and Recovery of Enzymatic Activity following Sodium Dodecyl Sulfate–Polyacrylamide Gel Electrophoresis: Use of Casein in Gel Wash Buffer — *Billy R. McGrew and D. MacDonald Green* 68

Transformation of *Pseudomonas aeruginosa* by Electroporation — *Jonathan M. Diver, Larry E. Bryan, and Pamela A. Sokol* 75

A General Procedure for Evaluation of Immunological Relevance of Synthetic Peptides: Peptides Synthesized on Paper in Enzyme-Linked Immunosorbent Assay — *Viktor Krchňák, Josef Vágner, Jan Novák, Alena Suchánková, and Jaroslav Roubal* 80

Pooling and Comparing Estimates from Several Experiments of a Michaelis Constant for an Enzyme — *Ronald G. Duggleby* 84

Exponential Gradient Maker Using a Disposable Syringe — *Alberto Domingo* 88

Influence of Type of Linkage and Spacer on the Interaction of β-Galactoside-Binding Proteins with Immobilized Affinity Ligands — *Hans-Joachim Gabius* 91

A Microtiter Plate-Based Assay for Phospho*enol*pyruvate Carboxylase — *William Cockburn, Garry C. Whitelam, Stephen P. Slocombe, and Raymond A. McKee* 95

Determination of Imipramine and Seven of Its Metabolites in Human Liver Microsomes by a High-Performance Liquid Chromatographic Method — *Tanja B. Zeugin, Kim Brosen, and Urs A. Meyer* 99

A Gas-Flow Cryostat for Use in Freeze–Quench Studies: Design and Application to Discontinuous Pre-Steady-State Spectral Analyses — *Alan D. Moodie, Robert H. Mitchell, and W. John Ingledew* 103

Photochemical Derivatization of Agarose: Synthesis of an Affinity Agarose Using a Photoaffinity Ligand Specific for the Peripheral-Type Benzodiazepine Receptor — *Anthony L. Parola, Neil E. MacKenzie, and Hugh E. Laird II* 107

Isocratic Reverse-Phase Liquid Chromatography Assay for Amino Acid Metabolic Disorders Using Eluates of Dried Blood Spots *Daniel W. Vollmer, David C. Jinks, and Robert Guthrie* 115

Use of Water-Soluble 1-Ethyl-3-(3-dimethylaminopropyl)carbodiimide for the Fluorescent Determination of Uronic Acids and Carboxylic Acids *Mikihiko Kobayashi and Eiji Ichishima* 122

Separation of DNA Fragments by High-Resolution Ion-Exchange Chromatography on a Nonporous QA Column *Yoshihiro Ohmiya, Yoichi Kondo, and Toshihiko Kondo* 126

Analysis of Aldehydic Lipid Peroxidation Products in Rat Liver and Hepatocytes by Gas Chromatography and Mass Spectrometry of the Oxime–*tert*-Butyldimethylsilyl Derivatives *Carina Norsten-Höög and Tomas Cronholm* 131

An Ultrafiltration Assay for Nucleotide Binding to Ribonucleotide Reductase *Mats Ormö and Britt-Marie Sjöberg* 138

Increased Resolution of Large DNA Fragments by a Two Dimensional Pulse Field Gel Electrophoresis *Philippe Sanséau, Christophe Tiffoche, Abdel-El Kahloun, Olivier Collin, Jean-Paul Rolland, and Jean Paul Le Pennec* 142

BOOK REVIEWS

Chemical Analysis: A Series of Monographs on Analytical Chemistry and Its Applications, Vol. 104, *Selectivity and Detectability Optimizations in HPLC.* Edited by S. Ahuja Reviewed by *I. S. Krull* 149

Drosophila, Vol. 1, *A Laboratory Handbook,* Vol. 2, *A Laboratory Manual.* By Michael Ashburner Reviewed by *James A. Kennison* 149

Methods in Enzymology, Vol. 182, *Guide to Protein Purification.* Edited by Murray P. Deutscher Reviewed by *Simon Black* 150

Briefly Noted. *Gene Probes for Bacteria.* Edited by A. J. L. Macario and E. C. deMarcario 150

Briefly Noted. *Advanced Practical Organic Chemistry.* By M. Casey, J. Leonard, B. Lygo, and G. Rocter 150

NUMBER 2, SEPTEMBER 1990

Review. High-Performance Anion-Exchange Chromatography for Carbohydrate Analysis *Y. C. Lee* 151

Single-Stranded RNA Molecular Weight and Shape Determination by Differential Pressure Capillary Viscometry, Sedimentation Velocity, and Gel Electrophoresis *Deborah L. Freerksen, Paul C.-F. Shih, Julia F. Vasta-Russell, Robert A. Horlick, and Wallace W. Yau* 163

Quantitation of Proteins Bound to Polyvinylidene Difluoride Membranes by Elution of Coomassie Brilliant Blue R-250 *Steven R. Kain and Helen L. Henry* 169

A Spectrophotometric Method for the Estimation of Polymer-Supported Sulfhydryl Groups *P. Sharma, S. Sathyanarayana, P. Kumar, and K. C. Gupta* 173

Further Studies on the Mechanism of Phenol–Sulfuric Acid Reaction with Furaldehyde Derivatives *Pragna Rao and Thillaisthanam N. Pattabiraman* 178

Luminol Chemiluminescence Reaction Catalyzed by a Microbial Peroxidase *Kengo Akimoto, Yoshifumi Shinmen, Motoo Sumida, Sumio Asami, Teruo Amachi, Hajime Yoshizumi, Yukikazu Saeki, Sakayu Shimizu, and Hideaki Yamada* 182

Site Specific Radioiodination of Recombinant Hirudin *A. Tuong, M. Maftouh, C. Picard, and M. Gachon* 186

Dispersal of Proteolipid Macroaggregates with Trifluoroacetic Acid and Analysis by Sodium Dodecyl Sulfate Polyacrylamide Gel Electrophoresis *Stephen Grayson and Sandy M. Sequeira* 192

Polyethylene Glycol Significantly Enhances the Transfer of Membrane Immunoblotting *Carl Zeng, Yuji Suzuki, and Elliot Alpert* 197

Quantitation of HIV-1 Proviral DNA Relative to Cellular DNA by the Polymerase Chain Reaction *D. E. Kellogg, J. J. Sninsky, and S. Kwok* 202

High-Performance Liquid Chromatographic Analysis of Fucoganglioside Hydrolysis by α-L-Fucosidase
Steven W. Johnson, Massimo Masserini, and Jack A. Alhadeff 209

Shotgun Concatenation of Synthetic Genes: Construction of Concatemeric Human Calcitonin Genes
Ivan G. Ivanov 213

Subfemtomole Enzyme Immunoassay for Human Growth Hormone Using Affinity Chromatography and Enzyme Amplified Detection
R. Lejeune, L. Thunus, F. Gomez, F. Frankenne, J.-L. Cloux, and G. Hennen 217

Recovery of Tryptophan in Peptides and Proteins by High-Temperature and Short-Term Acid Hydrolysis in the Presence of Phenol
Koji Muramoto and Hisao Kamiya 223

A Modification of a Protein-Binding Method for Rapid Quantification of cAMP in Cell-Culture Supernatants and Body Fluid
Christer Nordstedt and Bertil B. Fredholm 231

Computerized Estimation of Size of Nucleic Acid Fragments Using the Four-Parameter Logistic Model
Karen E. Oerter, Peter J. Munson, Wesley O. McBride, and David Rodbard 235

Measurement of 12(*S*)-Hydroxy-5*Z*,8*E*,10*E*-heptadecatrienoic Acid and Its Metabolite 12-Oxo-5*Z*,8*E*,10*E*-heptadecatrienoic Acid in Human Plasma by Gas Chromatography/Negative Ion Chemical Ionization Mass Spectrometry
Ute Hofmann, Sonja Seefried, Claus O. Meese, Thomas Mettang, Eugen Hübel, and Ulrich Kuhlmann 244

Detection of Chitin Deacetylase Activity after Polyacrylamide Gel Electrophoresis
Jean Trudel and Alain Asselin 249

A Quantitative Assessment for Transcriptional Pausing of DNA-Dependent RNA Polymerases *in Vitro*
Günter Theissen, Barbara Pardon, and Rolf Wagner 254

Mucin-Specific Bark Lectin from Elderberry *Sambucus sieboldiana* and Its Applications to the Affinity Chromatography of Mucin
Hiroshi Harada, Maki Kondo, Maki Yanagisawa, and Saburo Sunada 262

A Combined Nuclear Magnetic Resonance and Absorbance Stopped-Flow Apparatus for Biochemical Studies
William A. McGee and Lawrence J. Parkhurst 267

Vinyl Ketone Reagents for Covalent Protein Modification. Nitroxide Derivatives Suited to Rotational Diffusion Studies by Saturation Transfer Electron Spin Resonance, Using Membrane-Bound Na,K-ATPase as an Example
Mikael Esmann, H. Olga Hankovszky, Kálmán Hideg, Jens Arne Pedersen, and Derek Marsh 274

ANALYTICAL BIOCHEMISTRY
Methods in the Biological Sciences

INFORMATION FOR AUTHORS

Analytical Biochemistry is an international journal that publishes original articles on methods and methodology of interest to the biological sciences and all fields that impinge on biochemical investigation. In addition to the expected techniques that apply to biochemical preparations and analysis, the following should be considered as within the scope of the journal:

— Cell biology and cell, tissue, and organ culture methods that are of general application.

— Membranes and membrane proteins. These methods form a major section of interest.

— Procedures of interest in the field of molecular genetics including those necessary for cloning, sequencing, and synthesis of nucleic acids and for mutagenesis.

— Purification of enzymes and other proteins, but only if the methods are both novel and applicable generally, i.e., the interest is in a means of purification rather than in the protein that is being purified.

— Immunological techniques both analytical and preparative, if they are of general applicability by biochemists. Immunoassays are included but only if a unique approach is introduced rather than the determination of a substance not previously assayable.

— Pharmacological and toxicological research techniques that offer a biochemical approach.

— Review articles dealing with timely topics. Although these are generally invited, unsolicited outlines or manuscripts will be considered.

Manuscripts are accepted for review with the understanding that the same work has not been and will not be nor is presently submitted elsewhere, and that its submission for publication has been approved by all of the authors and by the institution where the work was carried out; further, that any person cited as a source of personal communications has approved such citation. Written authorization may be required at the Editor's discretion. Articles and any other material published in **Analytical Biochemistry** represent the opinions of the author(s) and should not be construed to reflect the opinions of the Editor(s) and the Publisher.

Authors submitting a manuscript do so on the understanding that if it is accepted for publication, copyright in the article, including the right to reproduce the article in all forms and media, shall be assigned exclusively to the Publisher. The Publisher will not refuse any reasonable request by the author for permission to reproduce any of his or her contributions to the journal.

Address. Manuscripts should be submitted in quadruplicate to:

Analytical Biochemistry

Editorial Office
Seventh Floor
1250 Sixth Avenue
San Diego, California 92101

In the case of rejected manuscripts, only one copy of the manuscript will be returned to the author.

An extended Instructions to Authors is published in the July issue during odd-numbered years. Reprints are available from the Editorial Office. Authors should consult this Information for details on nomenclature, IUPAC-IUB rules and recommendations, and accepted abbreviations.

Manuscripts should be concise and consistent in style, spelling, and use of abbreviations. In order to facilitate the processing of manuscripts, the journal requests that at least four copies be submitted, each copy to include all figures (originals or glossy prints) and tables. The original copy must be typewritten, double-spaced, on one side of white bond paper, about $8\frac{1}{2} \times 11$ inches in size, with one-inch margins on all sides. Each manuscript should have a separate title page noting title of article, authors' names (without degrees), complete affiliations, a running title (not exceeding 55 letters and spaces), an abstract (250 words), the address to which proofs should be mailed, and the corresponding author's telephone number and fax or telex number. In creating a title for your paper, please omit words such as *novel, rapid, improved, simple, sensitive, efficient, convenient, new.* Each is felt to be redundant and actually slows down the reader who is scanning the article titles and wants to know more about the method itself. Please substitute informative words that will give readers a more complete idea of the usefulness of your paper with regard to the limitations of their equipment or sample type. Abbreviations should not be used in the article title or running title. Please number all pages of the manuscript. The appropriate subject category should be indicated on the title page.

Text. The suggested organization of an article is: abstract; introductory statement; Materials and Methods; Results; Discussion; Acknowledgments; References. Some of these sections may be combined if the presentation is thereby made clearer or more effective. Although this is the general form, the journal will accept variation from it but does require an abstract.

Names of chemical or organic substances should follow the recommendations of the IUPAC–IUB Joint Combined Commission on Biochemical Nomenclature (JCBN) as published in the extended Instructions for Authors, appearing in the July issue of this journal during odd-numbered years.

Authors should draw attention to any particular chemical or biological hazards that may be involved in carrying out the experiments described. Any relevant safety precautions should be described; if an accepted code of practice has been followed, a reference to the relevant standards should be given.

Figures should be numbered consecutively with Arabic numerals in order of mention in the text: each figure should have a descriptive legend. Legends should be typed together on a separate sheet, double-spaced. All illustrations should be in finished form ready for photoreproduction. A convenient size for drawings is $8\frac{1}{2} \times 11$ in. (21 × 27.5 cm). They should be planned to fit the proportion of the printed page ($7\frac{1}{8} \times 9$ in.; column width, $3\frac{1}{2}$ in.). Lettering on drawings should be of professional quality or generated by *high-resolution* computer graphics and should be large enough that in the printed version the lettering is 6–8 point. Except for single-letter part designations lettering on printed figures should not be larger than 10 points. Wide variation in type sizes is undesirable. If, after reduction, the type in the figures would be larger than the type in the text, then publication of the article may be delayed. Drawings should be made with India ink on tracing linen, smooth surface white paper, or Bristol board. Alternatively, *high-quality* computer graphics may be acceptable. Graph paper if used should be ruled in blue. Grid lines that are to show in the final reproduction should be inked in black. Properly prepared glossy prints are acceptable.

Photographs must be kept to a minimum. All photographs should be submitted as single glossy prints with strong contrasts and not mounted on cardboard; the magnification should be indicated by a scale where possible. Simple histograms should be avoided. A table or a paragraph in the text is preferred.

Illustrations in color can be accepted only if the authors defray the cost.

Tables should be typed on separate pages, numbered consecutively with Arabic numerals in order of mention in the text. Each table should have a short explanatory title.

Authors may wish to submit complex tables or sequence information as camera-ready copy. In this way, they are spared tedious proofreading and the chance of error is reduced. Tables submitted as camera-ready copy should be typed single-spaced whenever possible, and preferably submitted as 5 × 7-in. glossy prints.

Footnotes should be designated in text by superscript numbers and typed on a separate sheet following the References. Footnotes to tables should be identified with lowercase italic superscript letters and placed at the bottom of the table.

References to the literature should be cited in the text by Arabic numerals in parentheses and listed at the end of the paper in consecutive order. Whenever reference is made to an author's manuscript "in press," copies of the manuscript must be included. Abbreviations of journal titles should follow the style used in *Chemical Abstracts Service Source Index,* 1985. Please note style of capitalization and punctuation for journal articles and edited books in the following examples:

1. Mitchell, L. G., and Merril, C. R. (1989) *Anal. Biochem.* **178,** 239–242.
2. Bovey, F. A., and Jelinski, L. W. (1983) Chain Structure and Conformation of Macromolecules, p. 150, Academic Press, New York.
3. Kaminsk, L. S. (1985) *in* Bioactivation of Foreign Compounds (Anders, M. W., Ed.), pp. 157–175, Academic Press, Orlando, FL.

Proofs. Proofs will be sent to the authors with reprint order forms. Fifty reprints of each article are provided free of charge. Additional reprints may be ordered using the form provided.

For information about advertising in *Analytical Biochemistry*, please write to Julie Davis, Advertising Coordinator, Academic Press, Inc., Journal Promotion Department, 1250 Sixth Avenue, San Diego, California 92101 (fax: (619) 699-6800).
